OxyContin is the brand name of the opioid oxycodone and it's used to treat chronic pain ranging from moderate to severe. Many opioids are designed to treat pain on an as-needed basis, so a person would take them for acute pain every four to six hours or whenever they felt they needed them. OxyContin is an extended-release medicine, which means that it's used for the around-the-clock treatment of pain. Get product Cheap Price USA Pain Pharma Company.
