Hydrogel butt injections and kits

hydrogel butt injections are minimally invasive cosmetic procedures that make the posterior area more substantial in a good way. The main components of the injection solution are water and polyacrylamide. Once the solution enters the body, the polyacrylamide acts as a filler to add to the size of the butt and give patients a more shapely silhouette. The effects of these injections are impermanent they disappear after about eighteen months.

The literal and figurative price of hydrogel butt injections can be astounding. One cubic centimeter (cc) of hydrogel is priced at three to five hundred dollars. A butt injection uses hundreds of ccs which makes the total amount to be spent quite high.

The hydrogel can increase or change the size of these areas:

1. Upper buttock
2. Middle buttock
3. Lower buttock
4. Hip expansion
5. Outer thighs

simple to use.

we have available a full hydrogel butt augmentation (injections) kit for sale.

This kit comes along with a user manual which your doctor can follow to administer the vial (hydrophilic polyacrylamide) for total enhancement.

Buttocks injections are a great option Call for orders now on: +27 74 676 7021
